Digital Literacy Project Report

Course Code: CSE0001

Name: Adhishree Singh

Registration Number: 25BAI11004

Branch: B.Tech Artificial Intelligence & Machine Learning

Year: First Year

University: VIT Bhopal University

Date: 30/03/2026

INTRODUCTION

This project focuses on understanding and applying digital literacy skills in practical scenarios. As a student and Digital Ambassador, the aim of this project was to explore different aspects of digital awareness, including communication, online safety, and professional presence.

The project includes multiple tasks such as creating an infographic, building a digital portfolio, practicing coding, understanding email etiquette, and studying cybercrime awareness. Each task helped in developing both technical and practical skills required in today's digital world.

Overall, this project helped me understand the importance of responsible digital behavior, effective communication, and the use of online tools in academic and professional environments.

Task 1 Create a Digital Literacy Awareness Infographic

For this task, I created a digital literacy awareness infographic using Canva. I tried to keep the design simple and easy to understand so that other students can quickly get the main idea.

In my infographic, I included topics like what digital literacy means, useful digital tools for students, safe internet practices, and professional email etiquette. I explained digital literacy in a simple way and added points about thinking critically, using digital tools properly, and being responsible online. I also mentioned tools like note-making apps, collaboration platforms, and design tools that students can use in their daily work.

The most challenging part for me was adjusting all the content on one page without making it look too crowded. At the same time, it was interesting to see how using colors, icons, and proper layout can make the information look more clear and attractive.

Task 2 Build Your Student Digital Portfolio

For this task, I worked on building my digital portfolio by creating and updating my profiles on platforms like GitHub and LinkedIn. Before this, I was not very familiar with how important these platforms are, but while doing this task, I understood their value.

On GitHub, I created my profile and added a README where I mentioned my basic details and what I am interested in learning. It helped me understand how projects can be organized and shared properly. On LinkedIn, I updated my education details and started building my professional profile. It gave me an idea of how students present themselves in a more formal and professional way.

Through this task, I realized that having a proper digital presence is important for future opportunities. In the coming years, I plan to keep updating my profiles regularly by adding new skills and projects. I believe this will help me in building a strong profile for internships and future career growth.

Task 3 Explore Coding & Collaboration Platforms

For this task, I used HackerRank as my coding practice platform and Google Forms as a collaboration tool. On HackerRank, I solved a problem based on shortest path algorithms with additional processing delays. This helped me understand how theoretical concepts can be applied to real-world scenarios. It also improved my problem-solving skills and logical thinking. Completing the challenge and seeing all test cases pass gave me confidence in my coding abilities.

For the collaboration part, I created a Digital Literacy Awareness Quiz using Google Forms. The quiz contains five questions, including both multiple-choice and short-answer types, to check the basic understanding of digital literacy among students. I also linked the form to a Google Sheet to collect and analyze responses easily.

Through this task, I learned how coding platforms help in improving programming skills, while tools like Google Forms are useful for surveys, data collection, and collaboration. These tools will help me in my academics by making learning more interactive and organized.

Task 4 Draft a Professional Email & Etiquette Guide

For this task, I worked on improving my understanding of professional communication in a digital environment. In Part A, I wrote two emails, one to request an extension for an assignment and another to apply for an internship. While writing these, I tried to keep the language simple, polite, and properly structured with a clear subject, greeting, and closing. This helped me understand how important it is to communicate clearly and respectfully in formal situations.

In Part B, I created a checklist of social media Do's and Don'ts. I included points like being respectful online, not sharing personal information, and avoiding fake news. I tried to keep it simple so that other students can easily understand and follow it.

One situation where poor digital communication can cause problems is when someone sends an incomplete or informal email to a teacher. It can create confusion or give a negative impression. This can be avoided by writing properly and maintaining a professional tone.

Task 5 Cybercrime Awareness Case Study & Prevention Guide

While doing this task, I got to learn how common cybercrimes like UPI fraud have become nowadays. What I found most surprising is that many people get scammed very easily, sometimes just by trusting a phone call or clicking on a link without thinking much. It made me realize that these scams don't always involve complex hacking, but mostly happen because people are not fully aware.

One habit I would like to change is being more careful while using online payment apps. I will make sure to check everything properly before approving any request and avoid clicking on unknown links or messages.

Overall, this task made me more aware about online safety. I understood that even small precautions can make a big difference in protecting ourselves from cybercrimes.

Conclusion

Overall, I feel that this project was a really good learning experience for me. Through all the tasks, I got a better understanding of what digital literacy actually means and how it is useful in our daily life. Each task taught me something different, whether it was creating an infographic, building my online profile, or learning about online safety.

I also understood how important it is to communicate properly in a professional way and maintain a good digital presence. The cybercrime part made me more aware about how careful we need to be while using the internet.

According to me, this project was not just about completing the tasks, but about learning things that will actually help me in my studies and future.
